

Team SeniorPanda: Steve Siyang Wang, Justin Zhang, Sanmay Jain  
Client: Ray Zwycewicz  
AppName: SeniorPanda (PD101)  
Data Last Updated: Dec 14, 2014

### **User Testing Participants:**

More than 5 users volunteered to give us user testing:

Jenny Ni (Hall-mate)

Mom \* 2

Friends on airplane

Highschool Friend

### **Description of how we would incorporate the user feedback into app:**

For the user testing, the prevalent feedback was that our app is generally very suitable for senior people to use, and they all liked our photo-sharing functionality. Some constructive criticism are: a) putting FAQ or directions for each UI on the upper right setting menu list, so that when user is confused, they can easily consult it. b) come up with a way to better the process of patient-doctor communication. Maybe add another functionality where patients and the doctor are in the same voice-message sharing bucket, and they can send voice messages to each other freely. Another piece of feedback was that the data log could be more visually appealing and is somewhat hard to read at the moment.

The user feedback were pretty great. For point a), it is easily implementable, and will do that if client wants. For b) it involves some substantial amount of work, and we will give that feedback to our client, as a great idea to work on in the future. For the last point, fixing the UI to be more visually appealing is also easily implementable.

### **Description of how we would want to run more user tests**

We would find more potential users among senior patients (with Parkinson's Disease) and doctors who already have established contacts with Ray. Also, we can randomly pick our friends and family members to use the app to test the photo-sharing feature. As we conduct the user testing, we would prefer to sit down with the users, watch them use our app and offer little or no help except the explicit instructions. We would document users' frustration in detail. In order to attract users, we may offer free coffee.
