## User Documentation

### FAQs

1. How to manage photos in the database?

You can upload and delete photos in the photo slideshow view, and the changes will be reflected instantly in the database system.

2. Can multiple users share the same photos?

Yes. Multiple users who are registered as a family account will have access to the same photos. You can also choose to change family sharing bucket by clicking the change bucket button on the upper right corner.

3. How reliable is the weather information?

The weather information is accurate. We gather data from third party provider, the OpenWeatherMap.

4. How to record daily symptoms and associated duration/location of each symptom in the app?

Click on the top right panel from the main screen in the application. The resulting screen is shown in the screenshots section labeled Symptom Screen. Then under each symptom section, click on the button that represents how long you experienced that symptom that day. Once you've selected this button, a window will pop up that allows you to select the location of your body where you have experienced this symptom. Select all the locations that apply.

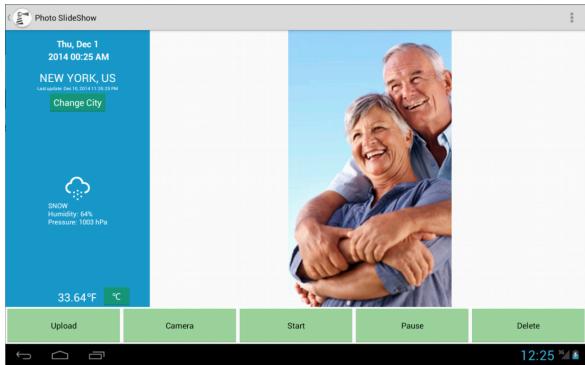

5. How to record the number of pills I have taken throughout the day?

Click on the top left panel and fill the button corresponding to the number of pills you have just taken. The resulting panel is shown in the screenshots section titled Dosage Screen. You must fill out this panel each separate time you take a dose throughout the day.

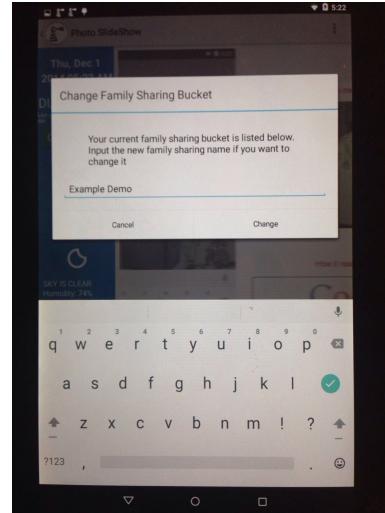

6. How do I review my submission history?

Clicking on the bottom left panel from the main screen will let you review your submission history.
